

# Infrastructure as Code

# Angel Núñez

@snahider

Agile Developer,  
Consultant & Trainer

# IT Ops es un trabajo complicado

# Snowflake Servers

# Problemas

- Difícil replicar un nuevo servidor con las mismas funciones.
- Difícil de escalar.
- Desfases entre ambientes.
- Muy frágiles y cambios con efectos secundarios.
- Baja confianza al realizar cambios.
- Sin versionamiento y seguimiento a los cambios.

# ¿Qué es Infrastructure as Code?

Es una práctica donde se describe y maneja la infraestructura de la misma manera que el código.

- Utilizando un lenguaje de alto nivel  
(DSL para infraestructura).
- Utilizando buenas prácticas de desarrollo de software  
(ejm: subir los cambios a un repositorio).

# Herramientas

CHEF™

ANSIBLE

CFEngine

# ¿Cómo es el código de infraestructura?

## Puppet

```
package { 'apache2':  
  ensure => installed,  
}  
  
service { 'apache2':  
  ensure => running,  
  require => Package['apache2'],  
}  
  
file { ['/var/www/html/index.html':  
  content => '<html>hello world</html>',  
  owner => 'root',  
  mode => '640',  
  ensure => present,  
}]
```

## Chef

```
package 'apache2' do  
  action :install  
end  
  
service 'apache2' do  
  action [:enable, :start]  
end  
  
file '/var/www/html/index.html' do  
  content '<html>hello world</html>'  
  owner 'root'  
  mode '640'  
  action :create  
end
```

Características: Abstracción e Idempotencia

# Beneficios

(Utilizar un script automatizado  
idempotente)

- Crear una nueva máquina automatizadamente desde 0.
- Asegurar que los ambientes son consistentes.
- Agregar un cambio y que se actualice en todos los servidores.
- Generar el ambiente de trabajo al equipo de desarrollo.

# Beneficios

(Utilizar código mediante una DSL de infraestructura)

- Probar todos los cambios.
- Versionado y seguimiento de los cambios.
- Integración y entrega continua de la infraestructura.
- Infraestructura auto-documentada.
- Herencia, composición, reusabilidad, encapsulamiento, etc.

# **Demostración**

## **"Instalando y Configurando Apache"**

# Probando Infrastructure Code

# Tipos de Pruebas

## Unit Test

Probar unitariamente el código sin provisionar (alterar) un nodo real.

## Integration Tests

Verificar que el código provisiona un nodo real de la manera esperada.

# Integration Testing

# Desafíos al Realizar Integration Testing

- Crear ambientes de pruebas de manera fácil y repetible.
- Interrogar el estado real del servidor.
- Un Test Harness que combine lo anterior.

# Serverspec

<http://serverspec.org/>

## About V2

Serverspec/Specinfra v2 has been just released. [See the document about v2.](#)

## About

With Serverspec, you can write RSpec tests for checking your servers are configured correctly.

Serverspec tests your servers' **actual state** by **executing command locally**, via SSH, via WinRM, via Docker API and so on. So you don't need to install any agent softwares on your servers and can use any configuration management tools, [Puppet](#), [Ansible](#), [CFEngine](#), [Itamae](#) and so on.

**But the true aim of Serverspec is to help refactoring infrastructure code.**

# Integration Tests

## Ambiente de Prueba

```
# spec/acceptance/nodesets/default.yml
```

```
HOSTS:
```

```
  ubuntu-1404-x86:
```

```
    roles:
```

```
      - masterless
```

```
    platform: ubuntu-1404-x86_64
```

```
    hypervisor: vagrant
```

```
    box: ubuntu14.04-x86
```

## Prueba

```
# spec/acceptance/jenkins_spec.rb
```

```
describe 'jenkins class' do
```

```
  it 'should work with no errors' do
```

```
    pp = "include jenkins"
```

```
    expect(apply_manifest(pp).exit_code).to eq(0)
```

```
  end
```

```
#Serverspec
```

```
describe service('jenkins') do
```

```
  it { should be_enabled }
```

```
end
```

```
end
```

# Configuración del Ambiente

```
# spec/spec_helper_acceptance.rb

RSpec.configure do |c|
  # Configure all nodes in nodeset
  c.before :suite do
    hosts.each do |host|
      # Install this module
      copy_module_to(host, :source => module_root,
                     :module_name => 'jenkins')

      # copies all the module dependencies
      rsync_to(host, fixture_modules, '/etc/puppet/modules/')
    end
  end
end
```

# **Demostración**

## **"Agregando Pruebas al módulo de Apache"**

# Porqué CD y Devops necesitan Infrastructure as Code

Infrastructure as Code es un habilitador:

- Permite agregar la infraestructura al pipeline de Continuous Delivery.
- Permite que Operaciones pueda utilizar prácticas ágiles para gestionar la infraestructura.
- Rompe barreras entre Dev y OPS.
